Professional Summary

Computer Science graduate combining a solid academic foundation in software engineering, databases, and systems analysis with hands-on practical experience gained within an enterprise IT environment. Skilled in technical troubleshooting, workstation configuration, user access management, and technical documentation. Experienced in requirements analysis and designing web-based solutions driven by structured problem-solving methodologies. Seeking an entry-level technical or engineering role to leverage analytical and technical skills in delivering robust and efficient digital solutions.

Education

University of Ha'il — Bachelor of Science in Computer Science | 2026

Cooperative Training

IT Trainee (Co-op) — Ministry of Environment, Water and Agriculture | March 2026 – August 2026

- Collaborated with the IT team to analyze and resolve operational issues concerning hardware, operating systems, networks, and enterprise platforms.
- Analyzed incoming user tickets and assisted in delivering appropriate technical solutions aligned with operational guidelines.
- Managed user accounts and access permissions across enterprise systems in accordance with established policies.
- Configured and deployed workstations, installed authorized enterprise software, and ensured device readiness for daily operations.
- Verified local area network (LAN) physical connectivity and integrated hardware peripherals into the IT environment.
- Analyzed recurring technical incidents and documented resolutions by developing Standard Operating Procedures (SOPs).
- Partnered closely with the IT staff and end-users to understand operational requirements and maintain system reliability.

Academic Projects

Graduation Project — Interactive Support Portal & Technical Troubleshooting Guide | 2026

- Analyzed and designed an interactive self-service web platform assisting users in diagnosing and resolving common technical issues through structured, guided workflows.
- Built intuitive, simplified user interfaces enabling non-technical staff to independently troubleshoot system and peripheral errors.
- Translated functional requirements into structured business logic to facilitate maintainability and future system scalability.
- Documented technical specifications, user requirements, and workflow logic to ensure usability and clean system architecture.
- Applied software engineering and systems analysis principles to organize and structure project components effectively.

Technical Skills

Software & Software Engineering: Computer Science Fundamentals & Algorithms, Software Engineering Principles & Systems Analysis, Web Application Development Fundamentals, Object-Oriented Programming (OOP)

Databases: Database Queries (SQL), Database Design & Data Modeling Fundamentals

Systems & IT Infrastructure: Windows Operating Systems Environment, Technical Troubleshooting & Diagnostics, Workstation Configuration & Deployment, User Account & Access Management, Local Area Networking Basics (LAN Connectivity), Hardware & Peripheral Configuration

Analysis & Technical Practices: Requirements Analysis, Technical Documentation & System Specifications, Standard Operating Procedures (SOPs) Development, Logical Thinking & Problem Solving

Soft Skills

Effective Technical Communication, Teamwork & Cross-functional Collaboration, Adaptability & Rapid Learning of Emerging Systems, Task Prioritization & Attention to Detail

Languages

Arabic: Native | **English:** Good — Technical Reading & Writing
